Certificate

Participants who successfully complete the programme
and fulfil all assessment requirements will be awarded a
joint Certificate of Completion by the Indian Institute of
Management (IIM), Bodh Gaya and the International Institute
of Security and Safety Management (IISSM), Delhi.

Background & Rationale

The contemporary landscape of safety, security, and crisis management is undergoing a fundamental transformation. Rapid urbanisation, climate-induced disasters, public health emergencies, cyber threats, financial frauds, and escalating geopolitical uncertainties have converged to create an environment where leadership failures can have catastrophic, multi-dimensional consequences.

India, as one of the world's fastest-growing economies, is simultaneously one of the most disaster-prone countries, ranking high on the Global Climate Risk Index and facing persistent challenges in crowd disasters, cyber-attacks on critical infrastructure, industrial accidents, and complex humanitarian logistics. Organisations operating in this environment, whether in the public sector, private security and safety industry, healthcare, logistics, or corporate governance, require leaders who are not merely technically competent, but strategically agile, technologically literate, and emotionally intelligent.

Despite a growing awareness of these imperatives, most leadership and management development programmes, addressing either technical safety management OR leadership OR technology in isolation. There exists a critical gap for an integrated, immersive learning experience that bridges these domains.

This programme is designed to address precisely that gap.

Vision

To develop a cadre of integrated crisis-ready leaders who can navigate complexity, leverage technology, govern safely, and communicate credibly in an era of cascading multi-dimensional risks.

Mission

To deliver a rigorous, practice-oriented executive development experience that equips participants with the knowledge, skills, and mindset to lead organisations through crises, design resilient systems, build adaptive teams, and act with strategic, ethical, and institutional intelligence.

Programme Objectives

Upon successful completion of this programme, participants will be equipped to:

- Demonstrate mastery across the spectrum of crisis management, from early warning and preparedness to response, recovery, and institutional learning.
- Apply technology-enabled tools, including AI, GIS, drones, digital twins, blockchain, and data visualisation, to enhance decision-making and operational efficiency in safety and crisis contexts.
- Navigate complex legal, regulatory, and governance frameworks governing security, disaster management, and public safety (PSARA Act, DM Act 2005, BIS Codes, Cyber Laws, etc.).
- Lead high-performing, emotionally intelligent teams in high-stress, high-stakes environments through applied design thinking and conflict management frameworks.
- Develop and execute multi-channel crisis communication strategies that protect organisational reputation and maintain public trust.
- Integrate financial acumen, fraud detection, corporate crisis management, with operational safety leadership.
- Design and evaluate humanitarian logistics, last-mile delivery, and inventory systems for emergency preparedness and response.
- Harness mindfulness and emotional intelligence as strategic leadership tools to foster psychological safety, strengthen team performance, and sustain organisational wellbeing during prolonged crises.

Curriculum Architecture

The **twenty-two (22)** modules of this programme are organised into four integrated theme clusters, each addressing a distinct but interrelated dimension of integrated crisis management:

S. No.	Theme	Coverage
1	Leadership & Organisational Excellence	Modules 1–6
2	Crisis Communication & Financial Resilience	Modules 7–9
3	Safety, Security & Operational Management	Modules 10–14
4	Governance, Technology & Legal Frameworks	Modules 15–22

Expected Programme Outcomes

At the institutional and societal level, this programme is expected to:

- Build a national network of integrated crisis management professionals who can collaborate across organisational boundaries during multi-hazard events.
- Strengthen the capacity of participating organisations to develop, test, and institutionalise crisis management plans.
- Contribute to the professionalisation of the private security and safety industry through rigorous, standards-aligned leadership development.
- Generate applied research insights through capstone projects that can inform policy, institutional design, and operational practice.
- Embed a culture of mindfulness, and psychological resilience equipping leaders to sustain team wellbeing through prolonged crises and high-stakes operational demands.
- Establish a model for integrated, cross-disciplinary executive education that can be replicated across regions and sectors.

**Evolve into the
leader you aspire
to become.**
